

# Docker : Docker MasterClass for DevOps

Create Docker Swarm Cluster |  
Complete Initialization and  
SetUp

# Docker : Service Containers

- Find all the Commands work on Docker Swarm Node  
`docker node --help`
- Get Token at runtime:  
`docker swarm join-token manager`
- Switch Manager Node in Docker  
`docker node update - -role manager <node_name>`

# Docker : Service Containers

- Create Docker Service with Replicas

`docker service create --replicas <Number of Replica> <Image>  
<Command>`

- Verify Which Node is running, which containers

`docker service ps <service_name>`

# Thank You...

Don't be the Same! Be Better!!!
